## Summary

**A growth leader who also builds — Shopify & headless (Sanity).**

I'm a growth engineer who works across the whole funnel — from **acquisition (SEO + paid ads)** through **CRO, email, and retention** — and I build the systems behind it (**Shopify, headless/Sanity, automation**), not just hand off specs.

I work close to revenue and decide with data (**GA4 + GTM**): I simplify the buying journey, run tests, keep marketing and operations aligned, and build systems that stay reliable as they grow.

## Selected impact

- Shopify UX and CRO: small weekly changes to product pages, cart and checkout, each measured against a baseline
- Sanity.io marketing-content layer over the ERP for the company's brands (structured content, spec-sheet generators, one-owner-one-direction sync)
- Velocity-based inventory alerts + human confirmation loop to reduce stockout risk
- E-commerce automation engine: **10k+ products** fully automated (SEO content, alt/tags, SEO filenames, CSV export)
- Marble.com estimate tool UX: **+300%** completed online estimates
- Carpal Tunnel Syndrome Test — mobile diagnostic web app (Cloudflare Workers + D1, peer-reviewed research)
- **Co-inventor — System and method for deep compositing of images in web browsers (US11113858B2, issued Sept 7, 2021)**

## Core skills

### Shopify UX + Growth

- UX for conversion: friction reduction, trust signals, information architecture
- CRO: experiment design, analysis, iteration — measured with **GA4 + GTM** and Shopify Analytics
- Traffic across the funnel: **Google Ads, Meta Ads**, and technical SEO working together
- Email: clear templates, segmentation, measurable testing (Mailchimp/Omnisend)

### Headless & CMS

- **Sanity.io**: structured content modeling, GROQ, custom Studio tooling, ERP→CMS sync with one-owner/one-direction contracts (multi-brand)
- Shopify beyond themes: customer-account UI extensions, webhooks, Admin API, metaobjects/metafields, Cloudflare edge workers

### SEO + Performance + Accessibility

- Technical SEO: crawlability, internal linking, structured data, indexation
- Performance: Core Web Vitals, script discipline, image strategy
- Accessibility: semantics, keyboard navigation, readable layouts

### Automation & AI (Node.js & LLMs)

- Node.js, microservices, event-driven workflows, webhooks, ETL/ELT
- LLM integrations (OpenAI, Anthropic Claude), human-in-the-loop guardrails
- Make.com, n8n, Zapier, Google Sheets API, Google Cloud Vision

### Business systems

- Sage ERP support (Accounting), SQL updates & data hygiene
- Integrations between ERP and web apps

### Systems & ops (supporting)

- Network design/config (routers, firewalls, VPN)
- Synology RackStation NAS, CCTV/cameras
- Workstation rollout & OS imaging
- VoIP PBX (Digium/Sangoma, SIP/Asterisk), basic CNC troubleshooting

## Experience

### Orlando Foods — Senior Digital Growth & Web Engineer (current)

- Own Shopify UX + CRO on the primary storefront: instrument with GA4 + GTM, run experiments, and ship measurable changes
- Run acquisition across Google Ads and Meta Ads alongside technical SEO
- Designed SEO landing-page architecture (13+ pages): buying guides → oven guides → recipe hubs with clean internal linking
- Built a Sanity.io marketing-content layer over the ERP for the company's brands — structured content, custom spec-sheet generators, and gap-analysis views
- Standardized Learn content structure (H1/H2/H3 hierarchy, scannability, on-page clarity)
- Simplified promotions: retired unused discounts, clarified naming, improved coupon visibility in cart
- Align inventory/fulfillment with marketing to reduce stockout-driven revenue loss
- Built velocity-based low-stock alerts + fast human confirmation loop (inventory updates in Shopify)
- Built a member community platform on Shopify for a member-based non-profit (customer-account UI extension + Cloudflare Worker moderation pipeline): replaced a manual publish workflow with self-service login-based profiles, and safely migrated the backlog — privacy-first, reversible, phased. Members now onboard themselves, and some share their own profiles unprompted (details anonymized)
- Maintain performance, accessibility, and technical SEO hygiene to support sustainable growth

### All Granite & Marble Corp (Marble.com) — Sr. Front-End Developer & UX Designer / IT Manager (via Inventive Software LLC)

2014–2025 · Marble.com and related product portfolio

- Early bet on responsive design (RWD) before mobile dominated; the site was ready when mobile became the majority of traffic.
- Built and maintained SEO-friendly content systems (articles, image descriptions, comparison tools).
- Contributed to a portfolio of products/brands as the business expanded (HouseTipster, VisualizerPlus, and others).
- Led cross-functional delivery and coordination (including periods managing work across **50+ people**).
- Key outcomes included: estimate tool UX improvements (+300% completions) and large-scale automation work (10k+ product pipeline).

## Patent

- **US11113858B2** — System and method for deep compositing of images in web browsers (issued Sept 7, 2021)
  Public link: https://patents.google.com/patent/US11113858B2/

## Education

- Master’s degree — University of Rzeszów

## Languages

English, Polish
